

Expanded Content Update 2

In this update:

The Rhythmic Tweakers Heaven

Over 500 individual loop presets, intuitively mapped with a 2 octave range of the original full loops, as well as key-mapped loop slices and accompanying midi files.

RHYTHMIC LOOP SUITES

LOOP-SLICED PRESETS

(With Original Midi Files)

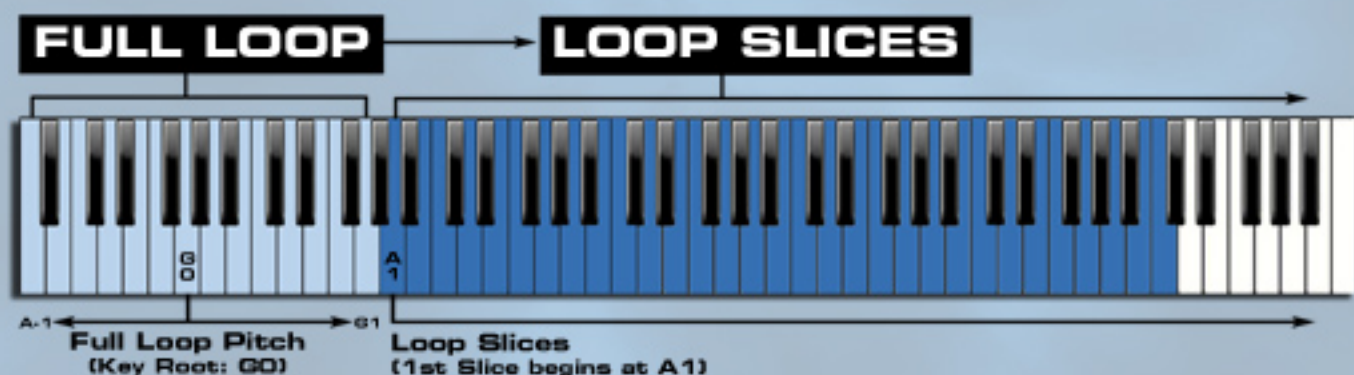

Combine full loops with individual loop slices for expanded creative options!

Now you can load individual loops from the percussive loop suites in expanded "loop sliced" presets. This enables extensive tweaking, rearranging, and transforming of the percussive loops in EVOLVE's core library. It works very simply: once you find a loop you like in any given core suite, simply load its individual preset, named according to the key note value of that loop suite.

Breaking It Down: The Loop Sliced Preset Layout

Referring to the diagram below, the original version of the loop is rooted on G0 and pitch-stretched one octave above and below the root key. When working with percussion loops, stacking and/or time-staggering several different pitches of the same loop can introduce interesting sonic results. The breakdown of the original loop (the "loop slices") is mapped chromatically, beginning at A1, up the keyboard. The number of mapped-sliced keys is dependent on the number of actual slices in the original loop.

Importing The Loop Suites' MIDI Files

Each loop has a corresponding midi file, which you can quickly and easily import to any host sequencer. We recommend placing the "MLS Midi Files" folder on your desktop for quick access. To import, simply drag and drop the the appropriate midi file, corresponding to the individual loop preset, into your host sequencer time line.
